Security Advisory

Vulnerability in Windows Shell Could Allow Remote Code Execution

Published: July 16, 2010 | Updated: August 02, 2010

Version: 2.0

Microsoft has completed the investigation into a public report of this vulnerability. We have issued [MS10-046](#) to address this issue. For more information about this issue, including download links for an available security update, please review [MS10-046](#). The vulnerability addressed is the Shortcut Icon Loading Vulnerability - [CVE-2010-2568](#).

Resources:

- You can provide feedback by completing the form by visiting the following [Web site](#).
- Customers in the United States and Canada can receive technical support from [Security Support](#). For more information about available support options, see the [Microsoft Help and Support Web site](#).
- International customers can receive support from their local Microsoft subsidiaries. For more information about how to contact Microsoft for international support issues, visit the [International Support Web site](#).
- The [Microsoft TechNet Security Web site](#) provides additional information about security in Microsoft products.

Disclaimer:

The information provided in this advisory is provided "as is" without

warranty of any kind. Microsoft disclaims all warranties, either express or implied, including the warranties of merchantability and fitness for a particular purpose. In no event shall Microsoft Corporation or its suppliers be liable for any damages whatsoever including direct, indirect, incidental, consequential, loss of business profits or special damages, even if Microsoft Corporation or its suppliers have been advised of the possibility of such damages. Some states do not allow the exclusion or limitation of liability for consequential or incidental damages so the foregoing limitation may not apply.

Revisions:

- V1.0 (July 16, 2010): Advisory published.
- V2.0 (August 2, 2010): Advisory updated to reflect publication of security bulletin.
